Introduction

In 1971 the Council of Ontario Universities (COU) established a number of task forces to examine questions relating to capital funding and the utilization of physical facilities within the Ontario universities. One of these task forces, the Task Force - Space and Utilization, was charged with developing and testing a space and utilization guide. In 1972 this task force published its findings in Volume 1 of the Building Blocks series of reports. At the time of publishing, however, the task force had not received comments from all of the universities and had been unable to revise its space and utilization guidelines where necessary. Accordingly, in November 1972 the COU Committee on Capital Financing established a standing subcommittee, the Subcommittee on Revisions to Building Blocks, to continue the work of its earlier task forces. Revised space standards developed by the subcommittee were adopted by COU at its meeting of 11 March 1977. A summary report of the work of the subcommittee was released in December 1978 as Volume 6 of the Building Blocks series. A COU subcommittee will be using the 1983-84 data in an evaluation of the existing guidelines for class and research laboratory space. Increased use of computers, for example, has changed the space requirements for both teaching and research in a number of disciplines. The guideline review committee may also identify other areas where revisions are needed.

Included in Volume 6 of Building Blocks was an updated inventory of physical facilities of Ontario universities as of 1 November 1977. As COU had agreed that updated inventory data should be collected on a triennial basis, the present report contains data for 1983-84. The

following tables present inventory data as of 1 November 1983 based on institutional submissions received in Spring 1984.

Table 1 is a summary of all net assignable square metres (NASM), by institution, for categories of space covered by COU space standards (categories 1 - 15) and for categories of space to which the standards do not apply (categories 17 - 20). The column labelled "Scheduled for Demolition" provides an indication of the NASM reported in categories 1-15 which institutions are presently planning to demolish. The column labelled "Privately Funded" includes NASM (categories 1 - 15) for construction which has been privately funded and for space constructed prior to November 1971 which was not included in the "allocation inventory" that constituted a factor in the interim capital formula. The column labelled "NASM Rentals" reflects the space reported in categories 1 - 15 which was being rented as of November, 1983. The rental costs associated with this space, for the 1983-84 fiscal year are reported in the column "Rental Costs".

Table 2 presents a detailed breakdown of all NASM, by institution, for each of the 20 space categories defined by the Sub-Committee on Space Coding.

Figure 1 shows these categories in graphic form.

Table 3 presents a distribution of NASM (categories 1 - 15) by age and excluding rentals. Age was determined according to the year of completion of a building cited or the year of major renovation. The final column, "Average Age" is a weighted average.

Figure 2 is a graph of NASM by single year of age.

Tables 4 - 25 present institutional space requirements as measured by COU revised space standards by comparison to actual inventory. It should be noted that the data in these and all subsequent tables includes space scheduled for demolition, privately funded space and rentals. Further, no provision for age or quality has been made.

Tables 26 - 36 provide analyses of space generated and inventoried by space type.

Figure 3 shows the space inventoried/space generated ratio for all space types.

Table 36 summarizes space generated and space inventoried per FTE student.

Note: Data for OISE (Tables 1,2 and 3 only) and for Algoma and Nipissing appear in this report for the first time. It should be noted that COU space standards were originally intended for application to multi-disciplinary institutions. Their application to Algoma, Nipissing, OISE (and to OCA) may not therefore be entirely appropriate. COU is in the process of examining the guidelines for laboratory space, and may also need to consider modifications in the guidelines for specialized institutions.

APPENDIX A

SPACE CLASSIFICATION SCHEME

SPACE CLASSIFICATION SCHEME

Section 1 - Notes

The space classification scheme is presented in three sections. This section defines the nature and scope of the inventory that is to be included in the reporting and addresses several recurring questions concerning space inventory and classification.

Categories

Section 2 is the classification scheme itself. It includes 19 categories of space type which are accompanied by definitions aimed at the main intent of the classification. The first 15 of these categories identify the more usual kinds of usable or assignable spaces in an institution for which space standards could normally be developed, while categories 16 through 19 classify non-assignable spaces or highly specialized facilities generally of a unique nature. The definitions of the space types are meant to be mutually exclusive.

Subcategories

Each of these 19 initial categories is further classified into one or more subcategories. These subcategories are identified merely by their names and by examples of specific room types that would likely be included. The examples of room types are neither exhaustive nor mutually exclusive, but are instead intended to characterize the nature of the subcategory. It should be emphasized that all rooms classified into a subcategory must meet the definition of the main category itself.

Exclusions

A specific set of Room Types Excluded has been specified for most categories of space to assist in the immediate identification of classification problems. For detailed commentary on individual rooms it is recommended that the glossary be consulted.

Glossary

Section 3 of the classification scheme is the glossary. This is intended to be a flexible document which will record detailed decisions and trade-offs that have been made in space classification problems. In some cases use of the glossary is probably the only means by which a room could be classified (e.g. see "Computing Facilities"). The glossary therefore, forms an integral part of the classification scheme.

Reporting Format

An attachment is included with the classification scheme, although it is not really a part of it. It is a suggested format for reporting the inventory. Because of its form it is also a handy list of the category and subcategory names. Of course, any university that has sophisticated enough computer systems to produce the report will automatically find this attachment to be redundant.

Scope of Inventory

The inventory of space that is to be reported is to include all spaces defined in the classification scheme regardless of whether the space is owned, leased or rented by the university or others, and regardless of the source of funds used for its construction or acquisition and regardless of the age or condition of the space. By this definition, the space reported may include facilities not owned by the university on one hand, or may exclude owned facilities on the other. Owned facilities which are excluded for example, could be houses used for domestic purposes or income and other properties which only incidentally serve the university population. In the broadest terms, the space to be reported should be that necessary and useful to the university in supporting the institution and its faculty, staff and students in their mission of instruction, research and public service.

Coding

The classification scheme in the strictest sense is not a coding scheme in that no information about the relationships between the categories is implied or can be obtained from the category numbers. It would appear that broad agreement on just what these relationships might be cannot be reached. In the absence of further direction, several universities have used the present list of numbers as a self-contained coding structure or have used the list as the basis for the development of a detailed use-coding scheme. As unsystematic as this may be, it at least assures a direct map into any future code structure which may be used for inter-university reporting, although of course, any set of one-to-one identifiers would do. In any event, it is expected that government reporting or inter-university comparison of space types will be conducted at the category or subcategory levels of detail. (This of course does not preclude the possibility of reporting by department and space type say, or by source of funds and space type.) It is further recognized that this classification scheme will not normally be detailed enough for internal use and the universities may differ widely on the development of a third level of space classification. It is expected that any handling of data at this third level will be on an ad-hoc basis and that no large systematic reporting or handling of data need be included for. Alternatively, the universities are encouraged to develop automatic means for reporting at the subcategory level, with and without subtotaling by department, building, and possibly source of funds.

Pro-Rationing

One of the primary purposes of the classification scheme was to distinguish between spaces that were put to differing uses by means of adequate definitions or, where these judgements were difficult to make, to develop entire new categories to describe those which fell somewhere in between. Pro-rationing should not, in general, be required to distinguish between differing uses or even to describe multiple use facilities. Whole classifications should almost always be attempted on the basis of the closest definition. Of course, minimizing the pro-rationing of rooms on the basis of use will not necessarily extend to the control, function or funding of space.

Source of Funds

As previously mentioned, all facilities that can be classified by the definitions are to be included regardless of source of funds. While source of funds is an important component in the description of the capital assets of an institution and, in particular, special provisions need to be made to encourage private funding of universities, it was felt that these matters lie outside the development of a space classification scheme. It was expected that each university would retain suitable records of its funding sources without direction.

Measurement of Space

Exacting definitions of space classifications were reviewed on pages 23 through 27 of Volume 1 of Building Blocks and comprise an excellent discussion of the major space types. Further specification of the methodology of space measurement hardly seems appropriate in such a practiced jurisdiction as Ontario. There are two areas however, in which recurring difficulty in the classification of space are apparent. The first concerns the classification of Inactive space.

Broadly speaking, the intent of the classification scheme is to classify inactive spaces as either assignable or unassignable. Inactive Assignable spaces are those which are deemed to be available for immediate occupancy but which had not been assigned to individuals or groups at the time of the survey. These spaces then, are unassigned (to individuals or groups) but are assignable (available for immediate use). Also included in this group would be larger areas constructed, finished and held for future use, or areas removed from active use because of declining needs or lack of operating funds, for example, an entire floor of a building which has been locked and kept under minimum heating. Such spaces, even though they may require some start-up time, should be reported in this subcategory. Further reporting in this subcategory could be spaces of small or moderate size which were unavailable for use for periods of time of up to one-half of an academic term, due to regular maintenance, refurbishing or minor renovations and for which the inclusion of the space either here (or for that matter in Categories 1 to 15), would not normally present a distortion of the needs of the institution. Because no definition of this type of space is included in the present Classification scheme, it is tentatively suggested that this space be reported as Sub-Category 19.5, Inactive Assignable, as noted on the reporting form.

The classification Inactive Unassignable should be then reserved for those spaces which would require long lead times and extensive work to make them available for occupancy. Such spaces would include those left unfinished at the time of construction or those undergoing renovations or major repairs requiring large areas of a building to be out of service for many months. In the case of very extensive renovations, it may in fact be more convenient to consider the building as "under construction" and simply not report the space at all. Again, because no definition is currently in the Classification Scheme for this type of space, it is suggested that any facilities be reported under Sub-Category 16.3, Inactive Unassignable.

The second difficult area of classification concerns the measurement of Circulation Area. According to the adopted definition on page 26 of Building Blocks, circulation area is that which is required for physical

access to some subdivision of space - whether or not enclosed by partitions. With increased use of office landscaped designs and the particular problems of measuring library space, there appears to be a need for some commentary in order that uniformity of measurement is achieved.

For such large unobstructed areas we should note that:

a) Code requirements must be met. The Ontario Fire Marshall's Office requires that floor plans of office landscaped areas indicate fire corridors, which must be left unobstructed. In addition, in some work areas subject to congestion, for example, large machine shops or warehousing areas, corridor demarcations may be painted on the floor to indicate fire escape routes or areas that must be left unobstructed for safety reasons. These should be measured as Circulation Area.

b) The divisions of space for which general access is required, as referred to in the Building Blocks definition, should certainly be construed to be those at the Category level of detail, and in most cases, the divisions should be made at the Subcategory level. In other words, routes necessary for general access to blocks of space which would be inventoried within a single subcategory, or corridor spaces which separate areas falling into separate subcategories, should be measured as Circulation Area.

c) Single rooms or work areas, plus integral support areas which serve a single purpose, for example: a gymnasium; a block of book stacks; spectator seating areas; or accounts payable offices plus file areas; should not include any spaces within them as Circulation Area. It is general access to the area which is the determinant, not routine movements within those spaces. Once again, an interpretive judgement will often need to be made on this space type.

Age and Quality

The age or condition of space is not to be held as a consideration when reporting space in the classification scheme. While it is agreed that such considerations may have considerable impact on the efficiency or usability of facilities, it was felt that these effects lie outside the purposes of the space classification scheme. First, the definitions are intended to classify space as used or as available for use. Second, no satisfactory methodology has yet been devised by which to judge the quality of space. Third, it is almost certain that such a judgement would be at least partly predicated on the actual inventory of the facility. It is recognized that some square metres are not equivalent to others, but the means for making these assessments must be separate from those used to inventory and classify the spaces.

Hospital Facilities

The inventory of universities with programmes in the health sciences may include spaces which are used as hospitals or may house clinical staff usually located in hospitals. Much but not all of the funding for these facilities was provided under the Health Resources Development Plan and is often referred to as Z-formula space. While it is necessary that each university maintain an inventory of these facilities, no specific method of reporting has been iden-

tified in this report. Probably it is preferable that the universities inventory the clinical science spaces in each of the appropriate categories 1 though 15 for which the spaces meet the definitions and include a new category (20 say) for those health care areas for which no definition is included. (These would likely be patient bedrooms and bathrooms, nurses' stations, surgery, treatment rooms, waiting rooms, and service and supply areas.) In any event, the point to be emphasized here is that these facilities are not to be included in regular reporting to the extent that the corresponding input measures to the proposed space formula are not reported. The intent, of course, is to ensure correspondence of reporting and any of several methods of recording the spaces would be suitable. As is usual with iron-clad rules such as the one above however, there is one known exception. For convenience, the definition of FTE Undergraduates has been drawn up in such a way that it will include interns and residents. It is felt that the distortion of generated space is not serious.

SPACE CLASSIFICATION SCHEME

Section 2 - Definitions

1. CLASSROOM FACILITIES

Definition

A room generally used for scheduled teaching purposes, not requiring special equipment of a kind that makes the room unsuitable for classroom instruction, and rooms directly serving such facilities.

Subcategories

1.1 Tiered classrooms

Tiered or sloped-floored lecture theatres, lecture rooms, lecture demonstration rooms, and classrooms.

1.2 Non-tiered classrooms

Flat-floored lecture rooms, classrooms, seminar rooms, and tutorial rooms.

1.3 Classroom service space

Examination rooms, projection rooms, preparation rooms, closets, storage rooms and other related areas.

Room types excluded

Class laboratories - see category 2.

Assembly facilities - see category 15.

Conference rooms - see categories 4 and 10.

2. LABORATORY - UNDERGRADUATE

Definition

A room used for instruction requiring special-purpose equipment for undergraduate student participation, experimentation, observation, or practice in a field of study, and rooms directly serving these facilities.

Subcategories

2.1 Scheduled class laboratory space

Teaching laboratories, special subject rooms, instructional shops, typing laboratories, drafting rooms, art and music studios, music practice rooms, language laboratories, and other specially designed

rooms largely used for scheduled instruction, such as dental, rehabilitation, and psychology clinics.

2.2 Unscheduled class laboratory space

This subcategory may be optionally used to classify key-punch and terminal rooms, general workrooms, drafting rooms, and other special-purpose facilities generally used for informal or irregularly scheduled instruction, or for practice.

2.3 Laboratory (undergraduate) support

Preparation rooms, balance rooms, laboratory storage rooms, demonstration rooms, animal areas, greenhouses, dark rooms, etc. directly serving the laboratory facilities.

Room types excluded

Laboratory space for graduate students and faculty - see category 3.

Non-university clinic facilities for health science programmes in hospitals or other health care areas.

Clinic facilities for university health services - see category 13.

Athletic facilities - see category 6.

Service areas for these excluded room types.

Animal areas classified elsewhere - see categories 3 and 18.

Greenhouses classified elsewhere - see categories 3, 9 and 15.

3. LABORATORY - GRADUATE AND FACULTY

Definition

A room used for laboratory applications, research or training in research methodology which requires special-purpose equipment for staff or graduate student experimentation or observation, and rooms directly serving these facilities.

Subcategories

3.1 Laboratory space

Faculty, graduate, and general research facilities.

3.2 Laboratory (faculty and graduate) support space

Rooms directly serving one or more research facilities which directly provide the necessary support to the research functions such as balance rooms, coat rooms, storage areas, dark rooms, technicians' office/workrooms, workshops, animal areas, and greenhouses.

Room types excluded

Undergraduate laboratories and their support space - see category 2.

Animal areas classified elsewhere - see categories 2 and 18.

Greenhouses not in support of research - see categories 2, 9 and 15.

4. INSTRUCTIONAL OFFICES AND RELATED SPACE

Definition

A room usually assigned to one or more individuals on a permanent basis, containing office-type equipment and used by faculty, departmental administrative and support staff, and students, or a room directly serving these facilities.

Subcategories

4.1 Faculty offices

Single or multiple-occupancy offices for teaching and research faculty with rank up to and including department chairmen.

4.2 Departmental academic support staff offices

Office space used by post-doctoral fellows, research assistants, demonstrators, technicians, and other professional staff directly involved in support of teaching or research, not holding an academic appointment.

4.3 Student offices

Single or multiple-occupancy rooms assigned to graduate students for study and to graduate and undergraduate students in their capacity as tutors, teaching or research assistants.

4.4 Departmental support staff offices

Office space used by administrative, clerical, and secretarial support staff to academic departments.

4.5 Office support space

Rooms directly serving office space in this category such as conference rooms, special reference libraries, file rooms, vaults, duplicating rooms, waiting and reception areas, interview rooms, storage areas, private toilets, lunch rooms, and private departmental lounges.

Room types excluded

Student offices associated with extra-curricular student organizations - see category 14.

Graduate laboratory work stations - see category 3.

Technicians' offices/workrooms classified elsewhere - see categories 2, 3, 5, 11 and 12.

Offices for deans and directors of academic divisions and their support personnel - see category 10.

Offices for general university administration - see category 10.

Central duplicating and printing areas - see category 12.

Lounges intended for general use - see category 14.

All space under the administration of the university library system.

5. LIBRARY AND STUDY FACILITIES

Definition

A room or group of rooms used for the acquisition, storage, circulation, study, or use of books, periodicals, manuscripts, and other reading and reference materials generally under the administration of the university library system and accessible to the university population at large, and rooms directly serving these facilities.

Subcategories

5.1 Library collection space

Stack and storage areas for books, archives, maps, documents, records, tapes, slides, micromaterials, periodicals, and music scores.

5.2 Study space

Library reading rooms, study carrels, open-stack reading rooms and study areas available to the general university population. These could be located in residences, or in facilities administered by the university library system, or academic departments.

5.3 Library support areas

Office and related areas for library administration, catalogue area, circulation desk, processing areas, bookbinding and repair areas, acquisition and cataloguing work areas, and library staff lounges.

Room types excluded

Media storage for language laboratories - see category 2.

Media storage for audio-visual facilities - see category 11.

Media storage for recreational purposes - see category 14.

Study areas assigned to individuals for their exclusive use in areas not administered by the university library system - see category 4.

Special reference libraries not under the control of the university library administration - see categories 4, 11, 12 and 19.

Faculty and instructional areas associated with academic programmes in library science and teacher education - see categories 2 and 3.

6. RECREATION/ATHLETIC SPACE

Definition

All indoor areas used by students, staff, or the public for athletic activities, either for recreational or competitive purposes, and rooms directly serving these facilities.

Subcategories

6.1 Athletic activity areas

Gymnasia, dance studios, swimming pools, basketball, handball and squash courts, combatives rooms, ice rinks, indoor tracks, indoor rifle and archery ranges, and activity areas including those within field houses.

6.2 Athletic seating areas

All permanent seating and observation areas in gymnasia, swimming pools, field houses, ice rinks, and other indoor activity areas.

6.3 Athletic service space

All ancillary areas directly serving the above such as locker rooms, shower rooms, washrooms, coaches' rooms, equipment supply rooms, and rooms serving athletic facilities.

Room types excluded

Laboratories required to support programmes in Physical and Health Education - see categories 2 and 3.

Office and office-related space serving athletic facilities - see category 10.

Office and office-related space in support of programmes in Physical and Health Education - see category 4.

Indoor rifle ranges associated with military training - see category 19.

7. ROOM SERVICE

Definition

A room or group of rooms used for preparing or eating food or which directly serve these facilities including central facilities located in residences and faculty clubs.

Subcategories

7.1 Food Facilities

Dining rooms, cafeterias, snack bars, coffee shops, restaurants, vending machine and other refreshment areas.

7.2 Food facilities service

Kitchen, servery, all food preparation areas, dishwashing areas, refrigeration rooms, freezer, and kitchen storage, receiving, refuse areas and staff lunch, locker and private washrooms.

Room types excluded

Office and office-related space which support food service facilities - see category 10.

Refreshment booths in athletic facilities - see category 6.

Kitchen and dining areas located in private living quarters - see category 17.

8. BOOKSTORE AND OTHER MERCHANDISING FACILITIES

Definition

A room or group of rooms used to sell products or services, exclusively or primarily for the university population, and rooms directly serving these facilities.

Subcategory

8.1 Bookstore/Merchandising

Bookstores, Canada Post Office, barber shops, other stores, and associated service space operated by the university or a commercial enterprise renting space from the university.

Room types excluded

General-use food service facilities - see category 7.

Departmental and campus mail rooms - see categories 4, 10 and 12.

9. PLANT MAINTENANCE

Definition

Space associated with the operation and maintenance of university buildings, grounds, and other elements of the physical plant.

Subcategory

9.1 Plant maintenance

Shops and storage areas for carpentry, plumbing, painting, electrical and other trades, garages for maintenance vehicles and all grounds equipment, greenhouses and related areas.

Room types excluded

Janitorial facilities - see category 16.

Vocational, technical, and instructional shops in support of academic programmes - see categories 2 and 3.

Office and office-related space - see category 10.

Security-related areas - see category 10.

Central stores - see category 12.

Central utility plant - see category 16.

10. ADMINISTRATIVE OFFICE AND RELATED SPACE

Definition

A room usually assigned to one or more individuals on a permanent basis containing office-type equipment and used by administrative and support staff, or a room directly serving these facilities.

Subcategories

10.1 Office areas

Single or multiple-occupancy rooms for executives, administrative staff, deans and directors of academic divisions and their immediate support personnel.

10.2 Office support space

Rooms directly serving office space in this category such as conference rooms, special reference libraries, file rooms, vaults, duplicating rooms, waiting and reception areas, interview rooms, storage areas, private toilets, lunch rooms, and private departmental lounges.

Room types excluded

Office and office-related areas classified elsewhere - see categories 4, 5, 8, 13, 14 and 17.

Central mail, duplicating and printing areas - see category 12.

Lounges intended for general use - see category 14.

11. AUDIO-VISUAL/TELEVISION FACILITIES

Definition

A room or group of rooms used in the production, distribution, and storage of non-print instructional media, and rooms directly serving these facilities.

Subcategory

11.1 AV/TV facilities

Radio, TV, sound, photography, and graphic studios, film and tape libraries, control rooms, storage rooms, recording rooms, repair and servicing work rooms, dark rooms, preparation rooms, and similar related areas.

Room types excluded

Rooms used primarily in support of an academic programme - see category 2 and 3.

Offices and office-related space serving this category - see category 10.

Printing of instructional media - see category 12.

12. CENTRAL SERVICES

Definition

A room or group of rooms used to provide campus-wide services for both academic and non-academic sections of the university, and rooms directly serving these facilities.

Subcategories

12.1 Computing facilities

Central data processing facilities, computer rooms, key-punch areas, technical service and repair areas and their support spaces.

12.2 Other central services

Central and regional printing and duplicating shops, central receiving areas, central stores, university mail rooms, laundry and drying rooms located in a central laundry, and technical service and repair areas.

Room types excluded

Data processing facilities and related areas intended for the sole use of students or faculty of a single academic unit - see categories 2, 3 and 4.

Laundry and drying rooms classified elsewhere - see categories 6, 8, 17 and 19.

Office or office-related space serving these facilities - see category 10.

13. HEALTH SERVICE FACILITIES

Definition

A room or group of rooms intended to supply health services primarily to the general student population, and rooms directly serving these facilities.

Subcategory

13.1 Health service facilities

Student infirmaries, doctors' offices/examining rooms, their support areas, offices and related areas within health service facilities, and first-aid rooms located elsewhere.

Room types excluded

Laboratory clinics - see categories 2 and 3.

Recreation/Athletic first-aid rooms - see category 6.

Clinic facilities for health science programmes in hospitals or other health care areas - see category 19.

14. COMMON USE AND STUDENT ACTIVITY SPACE

Definition

A room or group of rooms accessible to the general university population intended for recreation, rest, or relaxation, or rooms directly serving these facilities.

Subcategories

14.1 Student offices and support space

Offices and support space for student government, publications, and clubs.

14.2 Recreational facilities and service

Bowling alleys, pool and billiard rooms, ping-pong rooms, ballrooms, chess rooms, card playing areas, music listening areas, hobby rooms, storage and equipment issue rooms.

14.3 Lounge and service space

All general lounge space and kitchenettes, whether for students, faculty, or administrative staff, and general use lounges in residences and faculty clubs, including related service space.

Room type excluded

Athletic facilities, wherever situated, such as gymnasia, pools, and basketball, handball, and squash courts - see category 6.

Lounge space classified elsewhere - see categories 4, 5, 10, 16 and 17.

Offices for administrative staff concerned with student affairs and services - see category 10.

15. ASSEMBLY AND EXHIBITION FACILITIES

Definition

A room or group of rooms intended to serve the general university population and to be used for dramatic, musical, or devotional activities or for exhibition purposes, and rooms directly serving these facilities.

Subcategories

15.1 Assembly facilities

Theatres, auditoria, concert halls, chapels, and convocation halls and ancillary areas such as checkrooms, coat rooms, ticket booths, concession booths, dressing rooms, projection rooms, storage and control rooms.

15.2 Exhibition facilities

Museums, art galleries, other exhibition areas, greenhouses used for display only and supporting areas.

Room types excluded

Areas for displaying collections intended primarily for instructional and research purposes - see categories 2 and 3.

Assembly facilities for the primary use of academic programmes - see category 2.

16. NON-ASSIGNABLE

Definition

A room or area that is not available for assignment to the occupants of a building but which is necessary for the general occupation or mechanical support of one or a number of buildings.

Subcategories

16.1 Central utility plant

Boiler rooms, refrigeration plant, electrical transformer stations, cooling towers, compressing stations, water treatment facilities, incinerator, and their support areas serving more than one building or the entire campus.

16.2 Other non-assignable areas

Areas used or occupied by janitorial staff, circulation spaces, mechanical and electrical spaces, an incinerator serving one building, public washrooms, and non-assignable unfinished space.

Room types excluded

Circulation aisles within office suites, auditoria, or work areas.

Special-purpose storage and maintenance rooms - see categories 9 and 17.

Custodial supervisors' offices - see category 10.

17. RESIDENTIAL SPACE

Definition

A room or rooms used to accommodate one or more individuals and the ancillary areas in direct support of such rooms.

Subcategories

17.1 Residence living space

Single or multiple-occupancy bedrooms, and all space within apartments.

17.2 Residence service space

Laundry rooms, recreational areas, music rooms, games rooms, locker rooms, special-use lounges adjacent to living quarters, tuck shops, and administrative office space in direct support of residences.

Room types excluded

General-use lounges and recreation areas - see category 14.

General-use library and study areas - see category 5.

Food service and merchandising facilities coded elsewhere - see categories 7 and 8.

18. ANIMAL SPACE

Definition

Animal facilities in overall support of teaching or research and not normally integrated with or under the control of academic departments.

Subcategories

18.1 Specialized central areas

Conditioning, rearing, and long-range animal holding areas, and rooms directly serving these facilities.

18.2 Farm-type areas

Barn structures, feed storage, and field service areas.

Room types excluded

Animal areas integrated with or under the control of academic departments and in direct support of teaching or research - see categories 2 and 3.

Specialized facilities within central animal areas which are in direct support of research such as operating suites - see category 3.

19. OTHER UNIVERSITY FACILITIES

Definition

Any room or area not included in categories 1 through 15.

Subcategories

19.1 Day care facilities.

19.2 Rifle ranges and other space in support of military training.

19.3 Merchandising facilities not exclusively or primarily serving the university population.

19.4 Demonstration schools, and other instructional institutions for non-university students.

SPACE CLASSIFICATION SCHEME

Section 3 - Glossary

TYPE OF SPACE	DEFINITION	CATEGORY
Animal Space	1. Rearing, conditioning, and holding facilities before animals are ready or required for teaching and research purposes, located either on or off campus.	18
	2. Facilities for long-term holding and care of animals following surgical or other investigative treatment, located either on or off campus.	18
	3. Short-term holding and care of animals either before or following surgical or other investigative treatment, located on campus and closely related to academic departments.	
	- in support of teaching	2
	- in support of research	3
	4. Animal operating suites either for the use of one or several academic departments, located either on or off campus.	3
Coatrooms	see Lockers	
Computing Facilities	1. Centrally located and providing campus-wide services to both academic and non-academic sections of the university.	12
	2. Located in space of an academic division for its convenience, in support of instruction, or research, or both, but available also for general use by all sections of the university.	12
	3. Located in space of an academic division and fully used by that division for combinations of instruction, research, and administration.	12
	4. Located in space of an academic division for a specific use by that division as for example:	
	- for scheduled instruction in the use of computer equipment	2
	- for service to research by departments of the division	3

TYPE OF SPACE	DEFINITION	CATEGORY
Demonstration Schools	1. Facilities generally integrated with university facilities, in which children receive regular school instruction and are available for practice teaching and observation.	19
Examination Rooms	1. Space used exclusively or primarily for examination purposes throughout the academic year.	1
	2. Space used only occasionally for examination purposes as for end-of-term examinations, the primary use of which is for other purposes, classified in the category of its primary use as for example:	
	- an arena or gymnasium used for final examinations	6
	- a meeting or assembly hall used for final examinations	15
Greenhouses	1. Primarily in support of undergraduate instruction	2
	2. Primarily in support of graduate instruction and research	3
	3. Primarily in support of university grounds keeping	9
	4. Primarily for exhibition and display purposes	15
	5. For farm use	18
Inactive Space	1. Space available for occupancy but not assigned at the time of the survey	19.5
	2. Space not available for occupancy which was left unfinished at the time of construction	16.3
	3. Single rooms or small groups of rooms not available for occupancy due to repairs, renovations, or remodelling to be reported in the category of its intended <u>future</u> use	19.5

TYPE OF SPACE	DEFINITION	CATEGORY
	4. Buildings under construction are not to be reported	
Kitchenette	1. For an academic department	4
	2. For an administrative department	10
	3. For general lounge service	14
Class Laboratories	1. Primarily used for scheduled instruction, classified as Scheduled Class Laboratory Space	2
	2. Used in an unknown fashion or intended for scheduled use but just not used at the time of reporting, classified as Scheduled Class Laboratory space	2
	3. Primarily used for informal or irregularly scheduled instruction, and for practice, classified as Unscheduled Class Laboratory Space	2
Lockers	1. In support of a particular room, classified in the category of the space it supports, as for example:	
	- for a classroom	1
	- for a teaching laboratory	2
	- for a cafeteria	7
	2. For the general use of the students in a building	14
	3. Lockers in corridors	16
Lounges	1. For the private use of an academic department	4
	2. For the private use of library staff	5
	3. For the private use of a department in central administration	10
	4. For the general use of students or staff or both regardless of where located	14
	5. For general use in residences	14

TYPE OF SPACE	DEFINITION	CATEGORY
	6. For the private use of occupants of residences	17
Lunch, Locker and Change Rooms	1. In support of a particular kind of space to be classified in the category of the space it supports, for example:	
	- for physical education	6
	- for a bowling alley	14
	- for a research lab	3
	2. Provided for the exclusive use of people as necessary in the performance of their jobs, to be classified as the characteristic kind of space for that department, for example:	
	- for food service staff	7
	- for security patrolmen	10
	- for maintenance personnel	9
	- for custodial staff	9
Mail Rooms	1. A central facility for sorting and distributing mail for the campus	12
	2. Canada Post Office	8
	3. A room for sorting and distributing mail for:	
	- academic departments	4
	- central library	5
	- service departments and central administration	10
Media Storage (Recorded Music)	See Music Scores Storage and Tape Storage	
Merchandising	1. Products or services provided by the university or a commercial enterprise renting space from the university	
	- exclusively or primarily for the university population as for example a textbook store	8

TYPE OF SPACE	DEFINITION	CATEGORY
	- exclusively or primarily to the non-university community as for example a bank, public office, or commercial building	19
Music Practice Rooms	See Language Laboratories	
Music Scores Storage	1. For music studios or practice rooms as part of instruction in music	2
	2. For instruction or research, and located in libraries	5
	3. For music listening and recreation, and available to the university population at large, not in the central library	14
	4. For the exclusive use of occupants of residences	17
Offices	1. For faculty, post-doctoral fellows, graduate students, and departmental support staff	4
	2. For the most senior academic administrator in a major division of the university, usually called a dean or director, and their immediate support personnel	10
	3. For academic heads of single academic departments or small groups of closely related programmes, usually called a chairman or department head but sometimes called a dean or director, especially of a school	4
	4. For shared support personnel between the above two categories	4
	5. For library staff	5
	6. For central administrative staff	10
	7. For managers and administrative staff or merchandising operations providing services exclusively or primarily for the university population	8
	8. For recreation/athletic staff	10
	9. For food service staff	10

TYPE OF SPACE		DEFINITION	CATEGORY
	10.	For maintenance staff	10
	11.	For custodial supervisors	10
	12.	For AV-TV staff	10
	13.	For central services staff	10
	14.	For medical doctors, nurses, and administrative staff engaged in providing health care to students	13
	15.	For student clubs or student government	14
	16.	For technicians - see Technicians' Space	
	17.	For research associates - see Research Assistants' Space	
Research Assistants Space	1.	Space primarily used as work rooms rather than offices, classified as research support space	3
	2.	Space containing only office-type equipment, assigned to individuals, classified as departmental office space	4
Special Reference Libraries	1.	Reference libraries and reading rooms, not under the administration of the central library system, usually containing specialized or selected materials or special study facilities classified as part of the space they occupy as for example:	
		- in an academic department	4
		- in computer facilities	12
		- in residences	17
Special Subject Rooms	1.	For scheduled instruction in non-laboratory oriented subjects for which the space per station is larger than for a normal classroom to accommodate special arrangement of stations or equipment as for example in faculties of Education and Law	2
Stores and Storage	1.	Central receiving and storing of equipment, materials, and supplies for university-wide use	12

TYPE OF SPACE	DEFINITION	CATEGORY
	2. Storage areas within individual departments, classified in the category of the space they support as for example:	
	- classroom storage	1
	- department office supplies storage	4
	- building and grounds maintenance storage	9
	- residence storage	17
Study Space	1. Library study space for general or assigned use, under the administration of the university library system	5
	2. Departmental study space for general or assigned use, forming part of the study space of the central library system	5
	3. Departmental study space for general or individual use, but restricted to individuals associated with the department	4
	4. Other departmental study space for undergraduate students in support of laboratory instruction	2
	5. Study space in residences for the exclusive use of the residents and not part of departmental or university library space	17
Tape Storage	1. In direct support of teaching	2
	2. In libraries	5
	3. In support of AV-TV	11
	4. Computer tape storage	12
Technicians' Space	1. Space which may contain a desk but is primarily used as a work room rather than an office, classified in the category of space it supports, as for example:	
	- for teaching laboratories technicians	2
	- for research technicians	3

TYPE OF SPACE	DEFINITION	CATEGORY
	- for AV-TV technicians	11
	- for technicians in central services	12
	2. Space containing only office-type equipment, classified in the category of the office space of the department in which the technician works, as for example:	
	- in teaching laboratories	4
	- in research laboratories	4
	- in AV-TV	10
	- in central services	10
Unassigned or Unfinished Space	See Inactive Space	
Unscheduled Class Labs	See Class Laboratories	
Z-formula space	A special problem of identification may be present for universities with programmes in the Health Sciences. University space that is used to house hospital services or clinical departments usually located in hospitals is not covered by the capital formula. Entitlement for most if not all of this space is generated under the Z formula. However, it will need to be recorded and identified in university space records so that, upon request, it can be reported to MCU. It may need to be reported at a level of detail that will identify:	
	- the category of assignable space	
	- the use type within the category	
	- the clinical department holding the space, and	
	- the hospital affiliation of the academic staff within the clinical department holding the space	

TYPE OF SPACE	DEFINITION	CATEGORY
	A university may choose to develop its own method of identifying this space within its space records, or it may elect to use one of the following methods: 1. A separate category may be created into which all such space is allocated 2. All such space may be allocated to the appropriate category of assignable space (categories 1 through 15), identified in such a way that it can be extracted and reported upon request, for example, by department or source of funds.	

APPENDIX B

DEFINITION OF INPUT MEASURES

Definition of Input Measures

The following definitions identify four major groups of input measures that are useful in determining the space requirements of an institution. The names of the input measures may be readily recognized as being in common university use, but are not always valid for inter-institutional comparison unless detailed descriptions of the terms and, in some cases, the possible end uses are specified. These descriptions have been drawn up in the interests of inter-institutional comparability in response to requests for more exact definitions.

INPUT MEASURES

1.0 F.T.E. Students

1.1 F.T.E. Undergraduates

1.2 F.T.E. Graduates

In order to eliminate as many uncertainties as possible, it is proposed to adopt the definitions for student enrolment which are contained in the Operating Formula Manual published by the Ministry of Colleges and Universities. Accordingly, it is expected that the number of FTE students will generally be consistent with the number reported on the Ministry's UAR 1 forms submitted by universities in December. An exception to this general rule will arise in the case of universities who do not distinguish enrolment of affiliated institutions on separate UAR 1 forms. Such enrolment should be excluded where the related space is not included in a university's inventory.

For universities providing teaching services to affiliated church colleges, the enrolment is to be determined after allowing for the net services provided. For this purpose the fiscal full-time equivalency rules are to be applied to the course registrations of the students receiving instruction both from the university and from the affiliated college (in the case of a university student receiving some portion of his academic programme from the affiliated college).

The number of FTE students reported will be the sum of:

1) eligible fall term FFTE undergraduates x 2;

2) eligible and ineligible fall full-time graduates;

3) the full-time equivalency of eligible and ineligible fall part-time graduates;

4) such adjustments as may be required because of affiliated institutions.

The inclusion of ineligible graduates is intended to include those students who are making substantial demands on the university facilities, but for whom operating funds are not provided or for whom course durations have expired.

Universities operating trimester programmes would normally be expected to report the fall term enrolment only. In a case in which this was seen to be not representative, the university may choose to report a simple average of the fall and winter terms. In no case should the university use the three terms divided by two calculation as a basis for reporting.

2.0 Weekly Student Contact Hours

2.1 Laboratory

2.2 Non-Laboratory

The weekly student contact hours of a university are defined to be equal to the sum of the weekly student contact hours of all courses which are offered by the university as part of a programme of studies leading to a degree or diploma. The weekly student contact hours of a course are the product of the course enrolment and the hours of scheduled instruction received by each enrolled student during the reporting week. The course enrolment is the number of students participating in the instructional activities of the course. The hours of scheduled instruction are generally indicated in the course description contained in the university calendar or may be separately captured as data on a course file. The reporting week of a university is to be any representative week of the Fall term, which should generally correspond with the student enrolment as of November 1.

Laboratory weekly student contact hours are those weekly student contact hours of courses or portions of courses in which the instructional activity is facilitated by demonstration or experimentation requiring additional equipment not ordinarily available in classrooms. This would normally include courses requiring the use of language laboratories, the subject classrooms of faculties of education and art and other studios, as well as the traditional engineering, physical and biological science laboratories. Non-laboratory student contact hours are all weekly student contact hours as described above, other than laboratory weekly student contact hours.

3.0 F.T.E. Faculty

The faculty of a university is defined to include all persons up to and including department heads or chairmen holding an academic appointment, who receive remuneration from the university in return for conducting the instructional or research activities in part or in whole of courses offered by the university as part of a programme of studies leading to a degree or diploma.

The term academic appointment will normally be limited to those persons who are in or above that rank which immediately below that of Assistant Professor, as consistent with Statistics Canada reporting.

Included are visiting appointments and faculty on Sabbatical or Study Leave.

Excluded are Post Doctoral Fellows, clinical staff with full- or (the part-time portion of) part-time hospital appointments and faculty on unpaid leaves of absence, deans of major schools or academic divisions, vice-presidents and presidents.

The university may designate each member of faculty as full-time or part-time, but such designation should be made in association with consideration of the expected contribution of the member's time required to fulfil his assigned responsibilities. The full-time equivalent of part-time faculty is derived by dividing the total salary paid to part-time faculty by the average salary of all university full-time faculty.

4.0 Library Collections (Equivalent Volumes)

The library materials identified in the university library catalogue and contained in the following tables are to be included at the stated volume equivalency rate.

Material	Items	Equivalency
For Material Stored On Horizontal Storage Units		
Volumes - excluding reference	125	125
Computer tapes	125	125
Documents, pamphlets, archives	1,000 (items)	125
Microfilm - boxed on shelves	400 (reels)	125
Microfiche - boxed on shelves	10,000	125
Newspapers - current titles on display	7 (titles)	125
Periodicals - unbound titles on display	9 (titles)	125
Periodicals - boxed current year	30 (titles)	125
Periodicals - boxed back files	Included in volume count	
Phonodiscs - records	500	125
- tapes	500	125
- cassettes	1,000	125
Reference	45 (volumes)	125
Atlases	45	125
Slides - carousel boxes	75 (carousels)	125
Films	125 (films)	125
Filmstrips (boxed)	2,250 (strips)	125
For Material in Vertical Storage Units		
Maps	105	125
Microfilm (reels)	315	125
Micro-cards, fiche, etc.	7,900	125
Pamphlets	790 (pamphlets)	125
Slides (in cases)		
- bound	2,560 (slides)	125
- unbound	5,120 (slides)	125
Filmstrips	580 (strips)	125
Mounted Photos	790 (photos)	125

9.	Administrative Office	0.836 s.m./F.T.E. student	

*See Programme Classification Scheme attached

Programme Classification Scheme

The proposed space formula makes use of programme or discipline groupings in the generation of Class Labs, Research and Library space. The programme groups were developed originally from those listed in Appendix D of Volume 1 of Building Blocks. The programmes have been classified at the "second level" of detail as listed in that publication and it may be taken that these second levels are inclusive of the detailed programme names listed at the "third level".

The list of professional programmes used in the generation of library facilities are those of the Operating Grants formula.
